

PERFORMANCE TASK #1

INSTRUCTION

- You are tasked with creating a personal web portfolio using HTML. This will showcase various sections about yourself, your skills, education, and contact information. The portfolio must follow the HTML concepts learned during Lessons 1 to 4. Each section will be built progressively, so make sure you meet the specifications for each part.

PART 1: HOME PAGE CREATION

Objective:

Create the Home page of your web portfolio with the following requirements:

1.HTML Boilerplate: Ensure that the document has the correct HTML boilerplate structure

2.Title: In the `<head>` section, include a title for your page that reflects your name (e.g., "My Portfolio – [Your Name]").

3.Heading and Paragraph:

- Use an appropriate heading
- Add at least one paragraph (`<p>`) that briefly introduces yourself.

Note: Create your own Portfolio Logo.

PART 2: ABOUT ME SECTION

Objective:

Add an About Me section to your portfolio with the following content:

1. Paragraph Description: Write a brief paragraph about yourself—your background, interests, and goals.
2. Formatting Tags: Use at least five different formatting tags to style parts of the text in your paragraph.
3. Line Breaks: Use `<br>` `<hr>` to create appropriate line breaks between different parts of the paragraph to improve readability.
4. Incorporate video and pictures that will represent your About Me Section.

PART 3: SKILLS & HOBBIES SECTION

Add a Skills & Hobbies section with the following:

1.Unordered List for Hobbies:

- Create a list of at least 5 hobbies you enjoy using the `<ul>` (unordered list) tag.
- Customize the bullet points using the `list-style` attribute or another appropriate CSS method (e.g., different bullet types, colors).

2.Ordered List for Top Skills (add description for your skills):

- Create a list of your top skills using the `<ol>` (ordered list) tag.
- Include at least 5 skills in the list and number them.
- You can customize the numbering style using the `type` attribute (e.g., `type= "A"` for uppercase letters, `type= "I"` for numbers).

PART 4: EDUCATIONAL BACKGROUND TABLE

Create a table that outlines your educational background:

- 1.Educational Attainment: List the different levels of education (e.g., Pre-school, Elementary, Junior High School, Senior High School) in the first column.
2. School: In the second column, provide the name of the schools you attended.
- 3.Year Graduated: In the third column, indicate the year you graduated or expect to graduate.
- 4.Table Styling: Use the `<table>`, `<tr>`,`<th>`, and `<td>` tags to create and structure the table. Add borders and padding to the table for clarity and visual appeal (use CSS for styling). Include appropriate headings in the table (e.g., "Educational Attainment," "School," "Year of Graduation").

PART 5: NAVIGATION BAR

Objective:

Create a navigation bar for your portfolio that links to each section of the page:

1.Links: Your navigation bar should include the following links:

- Home
- About Me
- Hobbies & Skills
- Educational Background
- Contact
- Social Media Accounts

2.Navigation Bar Structure:

- Use the `<nav>` element to enclose the navigation bar.
- Use the `<a>` (anchor) tag to create links for each of the sections above.
- Ensure the links are correctly styled and lead to the appropriate sections of your page.
You can use anchor links (e.g., `<a href="#about-me">About Me</a>`) for smooth navigation within the page.

SUBMISSION GUIDELINES:

- **Use of AI is strictly prohibited.**
- Code Quality: Your HTML code should be clean, well-commented, and easy to read. Properly nest all tags, and ensure that your document is free from syntax errors.
- Responsiveness: While this task does not require advanced CSS, make sure that the page is responsive and looks good on both desktop and mobile devices.
- In your Github Repository make a new folder named PerformanceTask1 and inside create your html file named Surname_PerformanceTask1.html
- Don't forget to commit and push your files.
- **Please note that this performance task is to be completed entirely on school premises. Only work submitted during class time will be graded.**

CRITERIA FOR GRADING

Criteia	Points
Home Page Creation	10
About me Section	15
Skills & Hobby Section	15
Educational Background Table	20
Navigation Bar	20
Code Quality and Organization	10
Responsiveness and Design	10
TOTAL	100

Home Page Creation (10 Points)

Objective: To assess the proper use of basic HTML structure and the ability to introduce yourself on the portfolio home page.

- 10 Points: The page includes a correct HTML boilerplate structure (i.e.,`<!DOCTYPE html>`,`<html>`,`<head>`,`<body>`) and a proper title (e.g.,`"My Portfolio – [Name]"`). A heading and a paragraph are present in the `<body>`, introducing the user clearly.
- 8 Points: The HTML structure is mostly correct, but there are minor errors such as missing or misplaced elements, or the title does not reflect the student's name.
- 6 Points: Some key structural elements like `<head>` or `<body>` might be missing, or the title and paragraph are not formatted correctly.
- 4 Points or below: The HTML structure is incorrect, or the page is incomplete (missing title, heading, or paragraph).

About Me Section (15 Points)

Objective: To test your ability to create a paragraph with formatting and text styling that highlights personal information.

- 15 Points: The "About Me" section includes a well-written paragraph describing yourself. At least five formatting tags are used appropriately (e.g., ,<i>,<u>,,)to emphasize different parts of the text. Proper line breaks are used to ensure readability.
- 12 Points: The paragraph is well-written, but fewer than five formatting tags are used, or there is a minor mistake in their application (e.g., using incorrect tags for emphasis).
- 9 Points: The paragraph is too brief or lacks a few formatting tags. Line breaks might be missing or improperly used.
- 6 Points or below: The paragraph is missing or poorly formatted, with no proper use of text formatting tags.

Skills & Hobbies Section (15 Points)

Objective: To evaluate your ability to organize information using lists and customize the list styles for hobbies and skills.

- 15 Points: The Skills & Hobbies section contains two lists: an unordered list for hobbies (with at least 5 items) and an ordered list for skills (with at least 5 items). Each list is customized with appropriate styles, such as customized bullet points for the unordered list and numbered styles for the ordered list.
- 12 Points: Both lists are present, but there may be some minor formatting issues (e.g., inconsistent list style or missing items). 9 Points: One list is missing or incomplete, or there is minimal use of list customization.
- 6 Points or below: Lists are missing or not formatted correctly. The section lacks necessary HTML tags or structure.

Educational Background Table (20 Points)

Objective: To assess your ability to create and style a table to organize your educational information.

- 20 Points: The table is well-structured, containing 3 columns for Educational Attainment, School, and Year of Graduation. It includes proper use of `<table>`, `<tr>`, `<th>`, and `<td>` tags. Borders, padding, and other CSS styling (e.g., text alignment, colors) are applied to improve readability.
- 16 Points: The table is present, but there may be minor errors such as missing or incorrect table tags, or inconsistent styles.
- 12 Points: The table is created but lacks proper styling or does not fully meet the assignment requirements (e.g., missing a column or row, incomplete data).
- 8 Points or below: The table is either not created or does not follow basic HTML structure, missing key elements (e.g., no `<th>` , `<td>` , or missing data).

Navigation Bar (20 Points)

Objective: To test your ability to create a functional navigation bar that allows users to easily navigate between sections of the portfolio.

- 20 Points: The navigation bar is functional, with links to all required sections (Home, About Me, Hobbies & Skills, Educational Background, Contact, Social Media Accounts). The links are clear, correctly placed within a `<nav>` tag, and lead to the appropriate sections (using anchor links like `<a href="#about-me">`).
- 16 Points: The navigation bar is mostly functional but may have some missing links or errors in the linking structure
- 12 Points: The navigation bar exists but may be incomplete, with broken links or incorrect section IDs.
- 8 Points or below: The navigation bar is missing or non-functional. Some links may be absent, or the navigation does not lead to the intended sections.

Code Quality & Organization (10 Points)

Objective: To assess your ability to write clean, organized, and readable HTML code.

- 10 Points: The HTML code is well-commented, clean, and well-organized. It follows correct HTML syntax, with clear indentation and proper nesting of elements. Each section of the code is logically structured and easy to follow.
- 8 Points: The code is mostly clean, but there are a few instances where elements are poorly nested or the code could be more organized.
- 6 Points: The code contains significant errors in indentation, nesting, or readability, making it difficult to follow.
- 4 Points or below: The code is disorganized and contains multiple syntax errors, making it difficult to read or understand.

Responsiveness & Design (10 Points)

Objective: To evaluate the overall visual appeal and layout of your web portfolio.

- 10 Points: The design is clean, visually appealing, and well-organized. The layout is balanced, and the use of colors, fonts, and spacing enhances readability and user experience. The sections are clearly distinguished, and the overall design reflects a professional and cohesive look
- 8 Points: The design is generally clean and organized, but there may be some areas where the layout or use of colors/fonts could be improved for better readability or aesthetic appeal.
- 6 Points: The design lacks some cohesiveness or organization. The layout may feel cluttered or unbalanced, and the choice of colors or fonts might make the content harder to read.
- 4 Points or below: The design is poorly executed, with significant issues like unappealing color schemes, poor layout, or text that is difficult to read.
